

Research with Indigenous Peoples and Communities

with a focus on L'nu/Mi'kmaq

Overview

In the spirit of ensuring a respectful reciprocal relationship with First Nations, Inuit, and Métis (FNIM) communities, as well as a respectful and robust research agenda for faculty and students, Cape Breton University offers the following information to researchers and communities. This information reflects local, national, and international insight and experience to guide researchers and inform communities and participants about the best practices when conducting research in and with FNIM communities.

Tips and Information for researchers

- Indigenous research ethics, as with much community-based research today, emphasizes (and sometimes insists) that research questions come from the community itself, and that research projects reflect the will of the community and an applied focus.
- For this reason, it is often expected that researchers be able to indicate what outreach or relationships have begun forming with a community prior to the research (being careful, of course, that the research does not begin prior to ethics approval at the institutional and local levels).
- Community engagement may be informal, as in visits, meetings or emails, or it may be formal, as in a Research Agreement entered into with a community.
- Researchers are expected to be familiar with Chapter 9 “Research Involving the First Nations, Inuit, and Metis People of Canada” from the TCPS 2.
- It is the researcher’s responsibility to understand what jurisdictions their research may fall under and to seek appropriate ethical clearance.
- The CBU REB can grant approval without prior approval from the appropriate community or regional approval body.
- CBU REB does not issue letters stating that Mi’kmaq Ethics Watch approval (or any other local protocol) is not needed. It is the researcher’s responsibility to ensure all approvals required have been gathered.
